As a cross-sectional discipline that involves treatment from all areas of specialization, pediatric dentistry relies on the implementation of important developments in every dental field. This book discusses the most recent innovations in dentistry with direct implications for pediatric treatment and explores the rationale behind advocated changes in clinical practice. Presented by an international group of recognized specialists in their respective fields, the topics include the latest on epidemiologic research, fluoride guidelines, caries diagnosis, options for non- and minimally invasive caries treatment, pain-free techniques for local anesthesia, endodontic treatment, use of space maintainers, and treating children in vulnerable populations.
