Archaeomineralogy (Natural Science in Archaeology) George R. Rapp

1.1 Prologue What is archaeomineralogy? The term has been used at least once before (Mitchell 1985), but this volume is the first publication to lay down the scientific basis and systematics for this subdiscipline. Students sometimes call an introductory archaeology course "stones and bones." Archaeomineralogy covers the stones component of this phrase. Of course, archaeology consists of a great deal more than just stones and bones. Contemporary archaeology is based on stratigraphy, geomorphology, chronometry, behavioral inferences, and a host of additional disciplines in addition to those devoted to stones and bones. To hazard a definition: archaeomineralogy is the study of the minerals and rocks used by ancient societies over space and time, as implements, ornaments, building materials, and raw materials for ceramics and other processed products. Archaeomineralogy also attempts to date, source, or otherwise characterize an artifact or feature, or to interpret past depositional alteration of archaeological contexts. Unlike geoarchaeology, archaeomineralogy is not, and is not likely to become, a recognized subdiscipline. Practitioners of archaeomineralogy are mostly geoarchaeologists who specialize in geology and have a strong background in mineralogy or petrology (the study of the origin of rocks).

From reader reviews:

Lucy Fletcher:

Book is usually written, printed, or illustrated for everything. You can learn everything you want by a publication. Book has a different type. As we know that book is important matter to bring us around the world. Close to that you can your reading talent was fluently. A reserve Archaeomineralogy (Natural Science in Archaeology) will make you to always be smarter. You can feel far more confidence if you can know about every little thing. But some of you think that open or reading any book make you bored. It is not necessarily make you fun. Why they might be thought like that? Have you seeking best book or suitable book with you?

John Barrow:

This Archaeomineralogy (Natural Science in Archaeology) usually are reliable for you who want to become a successful person, why. The key reason why of this Archaeomineralogy (Natural Science in Archaeology) can be one of the great books you must have is definitely giving you more than just simple looking at food but feed a person with information that perhaps will shock your earlier knowledge. This book is usually handy, you can bring it everywhere and whenever your conditions in the e-book and printed kinds. Beside that this Archaeomineralogy (Natural Science in Archaeology) forcing you to have an enormous of experience like rich vocabulary, giving you trial run of critical thinking that we understand it useful in your day activity. So , let's have it and luxuriate in reading.

Elizabeth Easterling:

Is it anyone who having spare time in that case spend it whole day by simply watching television programs or just lying down on the bed? Do you need something totally new? This Archaeomineralogy (Natural Science in Archaeology) can be the response, oh how comes? It's a book you know. You are thus out of date, spending your extra time by reading in this brand new era is common not a nerd activity. So what these books have than the others?

Barbara Robbins:

As a university student exactly feel bored to help reading. If their teacher questioned them to go to the library or make summary for some reserve, they are complained. Just small students that has reading's heart and soul or real their interest. They just do what the teacher want, like asked to the library. They go to at this time there but nothing reading critically. Any students feel that reading is not important, boring and can't see colorful images on there. Yeah, it is to get complicated. Book is very important for yourself. As we know that on this period, many ways to get whatever you want. Likewise word says, ways to reach Chinese's country. So , this Archaeomineralogy (Natural Science in Archaeology) can make you feel more interested to read.
