Immunocomputing: Principles and Applications Alexander O. Tarakanov, Victor A. Skormin, S.P. Sokolova

Overview This book introduces immunocomputing (Ic) as a new computing approach that replicates the principles of information processing by proteins and immune networks. It establishes a rigorous mathematical basis for IC, consistent with recent findings in immunology, and it presents various applications of IC to specific computationally intensive real-life problems. The hardware implementation aspects of the IC concept in an immunocomputer as a new kind of computing medium and its potential connections with modern biological microchips (biochips) and future biomolecular computers (biocomputers) are also discussed. All biological systems at the cellular and biomolecular levels are sophisticated mechanisms honed to perfection by millions of years of evolution, and their exploration provides inspiration for various novel concepts in science and engineering. Of these systems, however, only two types, the neural system and the immune system of the vertebrates, possess the extraordinary capabilities of "intellectual" information processing, which include memory, the ability to learn, to recognize, and to make decisions with respect to unknown situations. The potential of the natural neural system as a biological prototype of a computing scheme has already been utilized intensively in computer science through the mathematical and software models of artificial neural networks (ANN) and their hardware implementation in neural computers (see, e.g., Haykin, 1999; Wasserman, 1990).

From reader reviews:

Scott Halpin:

What do you in relation to book? It is not important to you? Or just adding material when you really need something to explain what your own problem? How about your spare time? Or are you busy individual? If you don't have spare time to complete others business, it is give you a sense of feeling bored faster. And you have extra time? What did you do? Every individual has many questions above. They should answer that question due to the fact just their can do which. It said that about e-book. Book is familiar in each person. Yes, it is proper. Because start from on guardería until university need this kind of Immunocomputing: Principles and Applications to read.

Janette Collins:

The book with title Immunocomputing: Principles and Applications has a lot of information that you can find out it. You can get a lot of benefit after read this book. This particular book exist new knowledge the information that exist in this publication represented the condition of the world now. That is important to yo7u to know how the improvement of the world. This kind of book will bring you with new era of the syndication. You can read the e-book on your own smart phone, so you can read it anywhere you want.

Barbara Gunter:

A lot of people always spent their very own free time to vacation or go to the outside with them friends and family or their friend. Were you aware? Many a lot of people spent that they free time just watching TV, or playing video games all day long. If you want to try to find a new activity this is look different you can read a new book. It is really fun for you. If you enjoy the book that you read you can spent all day every day to reading a book. The book Immunocomputing: Principles and Applications it is very good to read. There are a lot of people who recommended this book. These were enjoying reading this book. When you did not have enough space to bring this book you can buy the particular e-book. You can m0ore very easily to read this book from the smart phone. The price is not too costly but this book has high quality.

Charline Bynum:

The reason? Because this Immunocomputing: Principles and Applications is an unordinary book that the inside of the guide waiting for you to snap the idea but latter it will shock you with the secret the item inside. Reading this book adjacent to it was fantastic author who else write the book in such remarkable way makes the content inside easier to understand, entertaining way but still convey the meaning completely. So , it is good for you because of not hesitating having this anymore or you going to regret it. This unique book will give you a lot of gains than the other book include such as help improving your expertise and your critical thinking way. So , still want to postpone having that book? If I have been you I will go to the book store hurriedly.
